

PROTECT YOUR TOPSIDES

AGAINST THE OIL SPILL

USE RESTRUCTURE MARINE POLISH

Restructure Marine Polish when applied correctly, provides a barrier seal that impedes the intrusion of oil into your topside gelcoat.

Apply the polish to all gel coated and fiberglass surfaces from your waterline up. Apply a second coat just above the waterline where oil is most likely to accumulate.

After applying the polish, remove accumulated oil with a strong spray of water.

The oil may have a thick sticky tar-like form due to its exposure to the elements which will damage gelcoat if not removed.
